

# Bit Finance Ltd

## Initial Coin Offering (ICO)

### Initial Coin Offering (ICO) explained:

Like an initial public offering (IPO) of stock from which its name is derived, an ICO is a way that cryptocurrency startups - and even established manufacturing companies - can raise money.

In an ICO, a quantity of the crowdfunded cryptocurrency is preallocated to investors in the form of "tokens" in exchange for traditional money or cryptocurrencies such as Bitcoin or Ethereum. These tokens will become tradeable when the ICO's funding goal is met and the project launches.

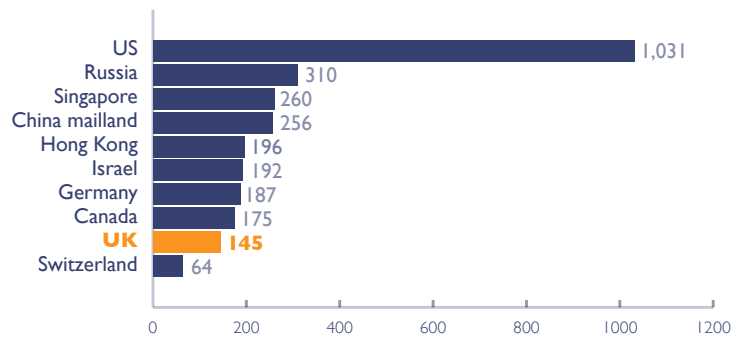

The total amount of funds raised via ICOs in 2017 was nearly US\$4 billion.

### Our offering:

Bit Finance Ltd will be building a regulated financial entity in London to focus on combining the world of crypto currencies with real world transactions. We are issuing aBIT tokens and our aim is to list these tokens on major token exchanges during Q3 2018.

For further and more detailed information please sign up for whitelisting and we will send our whitepaper once it is publicly available.

ICO projects by country/region/jurisdiction (US\$ Million)

### Examples of recent ICOs in Financial Sector

Company	Jurisdiction	Market Cap
Bankera	Lithuania	\$151m.
